

AVAILABLE FOR WORK - CHENNAI

AI & MACHINE LEARNING SYSTEMS ENGINEER

# VISHAL PATEL

Engineering repeatable, reliable systems that bridge AI decision pipelines and high-performance visual software experiences.

CAREER JOURNEY

## DEVELOPER JOURNEY

Collaborating with cross-functional engineering teams inside production-grade environments.

01 - QRAPTOR

02 - RIDEABIT

### AI ENGINEERING INTERN

QRAPTOR · REMOTE

JUN 2025 - PRESENT

Designed and developed key services for QRaptor, an AI-native app builder platform. Optimized model pipeline orchestration to scale workflow automations and decision-making logic.

IMPACT METRIC 01

Automated pipelines for AI integrations

IMPACT METRIC 02

Designed scalable API frameworks

FEATURED PROJECTS

# ENGINEERED SYSTEMS

Production-ready applications and machine learning engines built with explicit privacy, low latency, and systemic architecture in mind.

PROJECT 01 // INDEPENDENT CREATOR

## AUTISMIND AI

Intelligent healthcare system designed to assist in developmental monitoring and behavioral trend prediction.

### INTERACTIVE INFERENCE SIMULATOR

100% OFFLINE MODEL

Observation Age:

36 Months

Behavioral Variance Index:

4 / 10

PREDICTED RISK CLASSIFICATION  
MODERATE FOCUS

INFERENCE LATENCY  
14.2 ms

MEMORY FOOTPRINT  
4.2 MB

KEY METRIC: 100% OFFLINE PREDICTABILITY WITH SUB-50MS EXECUTION DELAY.

GROWTH & MOMENTUM

# EVOLVING & GROWING

Metrics and key milestones demonstrating continuous technical development and expansion across algorithms and systems.

001 · ACADEMIC SCORE

**9.70** CGPA

Computer Science Engineering with specialized focus in Artificial Intelligence and Machine Learning models.

002 · AI & ML MODELS

**10+** SYSTEMS

Engineered and sandbox tested models ranging from offline prediction engines to distributed computer vision pipelines.

003 · OPEN SOURCE CODE

**12+** PUBLIC REPOS

Maintained active repositories featuring full-stack applications, ML notebooks, and custom system tools.

004 · CODE QUALITY

**100%** REFACTOR RATE

Iterative design philosophy ensuring algorithms and layouts are continuously benchmarked and calibrated.

### FUTURE VISION

# LOOKING FORWARD

Instead of building for today's frameworks, we design architectures ready for tomorrow's parameter scale. Here are the core fields currently being researched and sandboxed.

#### 01 · AGENTIC SYSTEM ORCHESTRATION

RESEARCH FIELD: LANGGRAPH, LANGCHAIN, VECTOR DATABASES

Designing secure, tool-enabled AI agents capable of autonomous execution, planning, and multi-turn collaboration under strict guardrails.

#### 02 · EDGE INFERENCE & COMPILATION

RESEARCH FIELD: ONNX RUNTIME, QUANTIZATION, WEBASSEMBLY

Compiling and deploying deep learning models locally inside client browsers and low-power IoT architectures, bypassing remote API points of failure.

#### 03 · DISTRIBUTED SPATIAL COMPUTING

RESEARCH FIELD: PYTORCH, FASTAPI, GPU INGESTION PIPELINES

Optimizing high-throughput geo-spatial and visual datasets using custom multi-threaded loaders to deliver real-time visual maps.
